COCOA BROWN	BURGUNDY	MATTE BLACK	BLACK

Actual colors may vary from the color samples shown. Colors are only available for PBR.

NEW PREMIUM FEATURE:

All our sheet panels are now built with AZ50 Protection: an extra-thick, rust-fighting shield that keeps your sheet panels looking new for decades.

DON'T SETTLE FOR LESS: THE AZ50 DIFFERENCE:

Superior Metal Protection: While many companies use a thinner AZ35 coating to lower costs, we exclusively use AZ50. This provides 43% more protective alloy on every panel, ensuring a thicker shield against the elements.

Zinc-Enhanced Durability: Our AZ50 panels feature a higher concentration of zinc and aluminum, creating a permanent barrier that blocks rust up to four times longer than standard metal.

Building Code Compliant: AZ50 is the industry standard for high-quality residential roofing. Thinner coatings like AZ35 often lack the same warranties and may not meet the strict International Residential Code (IRC) standards for your home.

ULTIMATE STRUCTURAL STRENGTH:

Grade 80 steel boasts a minimum yield strength of 80,000 psi, nearly 60% stronger than standard Grade 50 steel, ensuring your building can withstand extreme snow loads and high wind speeds.
